

GEOTERRA®

PORTABLE CONSTRUCTION MATS

Transmission Line Access Over Soft Ground

KEEP LINE TRUCKS MOVING

Building access roads over extremely wet areas is a common challenge for energy companies as they install or service transmission lines. The ability to deploy mats quickly and easily to bridge these soft areas is key to keeping projects on schedule.

EASE OF HANDLING WITHOUT SPECIAL EQUIPMENT

GEOTERRA mats are strong, yet light-weight, making them easy to handle and install, even in difficult-to-access sites.

GEOTERRA ADVANTAGES OVER ALTERNATIVE MATS

- **FAR LESS EXPENSIVE:** A fraction of the cost of other mat systems (Composite HDPE, Steel, Fiberglass, and Timber).
- **SAFER:** No heavy equipment required to install, eliminates need to mobilize special handling equipment, and potential for worker injury.
- **LOWER LIFE-CYCLE COST:** Tough HDPE material can be used and reused several times, reducing the mat system's life-cycle cost.

GEOTERRA Mats can be configured to fit any site requirement. GEOTERRA sections are placed over a high strength geotextile.
