

Porous paving for private garden

Project:	Permeable surface for a front garden
Project Location:	Horncastle, Lincolnshire
Client:	Private homeowner
Main Contractor:	Pickwell Paving
Product(s):	BODPAVE™85 Porous pavers & Terram T1000 Geotextile

CLIENT - Private homeowner

Pickwell Paving, based in Lincolnshire, has been running since 1988 and was set up by Charles Pickwell. His son Lee, who has worked for the company since 2000, became a partner 5 years ago. The firm carries out hard landscaping and paving contracts in commercial and domestic markets. It has used TERRAM products for a number of years, namely TERRAM T1000 and BODPAVE™85.

APPLICATION FUNCTION

Permeable surface to aid drainage and add stability.

PROJECT

The brief was to replace an existing lawn as the elderly clients were looking to reduce maintenance whilst maintaining an attractive finish as they hold an annual open garden event for charity. They were keen to use a permeable product as the garden has previously been subject to flooding in heavy rainfall.

SOLUTION

BODPAVE™85 was the ideal choice due to its attractiveness when laid, its ease of maintenance and its ability to allow visitors to access the open gardens without feeling unsteady on loose gravel.

RESULT

BODPAVE™85 helped Pickwell meet its brief thanks to its permeability, gravel retention and speed of installation which helped keep costs down for the client.

Pickwell Paving's Lee Pickwell said: "Whether it's large commercial contracts or small domestic ones, TERRAM's products are always our first choice and we will continue to recommend them for future projects."
