

Another Dandy Success Story

Application: Inlet Sediment Control
Location: Denver, CO
Products: Dandy Products

When Colorado Needed Long Term Statewide Development They Turned To Dandy

The Challenge:

With the new NPDES Storm Water Runoff regulations, the Colorado Department of Transportation needed to make sure they were up to code - an ongoing challenge in their 7-year reconstruction of Highway I-25.

The Solution:

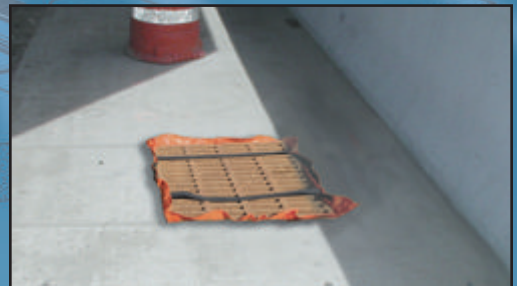

They turned to Southeast Corridor Constructors (Kiewit) and Carter Burgess Engineering who then turned to Dandy Products. Dandy Products were picked for their superior filtering capabilities, the variety of products they carried, their bright colors (easy visibility), their low cost and ability to perform under construction loads.

The Results:

Dandy's inlet protection products were installed throughout the project and were used and re-used because they were properly maintained - this saved Denver both time and money. Performance studies have been done on Dandy Products by the Colorado DOT and the positive results have lead them to use more and more Dandy Products on construction projects throughout the state.
