

Patios

Typical Material Install:

1½" Porous Pave XL in residential applications

2" Porous Pave XL for commercial and high traffic applications

Typical Base Requirement:

2" Crushed base in residential applications

4" Crushed base in commercial and high traffic applications

Porous Pave is an ideal alternative to brick pavers for patios. Flexible nature prevents cracking and crumbling.

Pour in Place material allows any shape to be easily installed. Much faster than paver installation.

Eliminates Standing Water - porous design allows water to quickly drain through.

Low Impact Installation - can be installed in existing landscapes with very little disruption.

Can be Installed over existing concrete, paver or wood patios provided base is structurally sound. Provides excellent cost savings versus removing existing materials!

Non Slip Surface - high rubber content provides good traction, even when wet. Reduces chance of slip and fall accidents.
