

WATERSAVER products are anionic, polyacrylamide-based superabsorbent polymers that, when incorporated into a soil or substrate, absorb and retain large quantities of water and nutrients. Unlike most products that become hydrated, WATERSAVER is able to release the absorbed water and nutrients over time as needed as a function of the absorption/release cycles.

BENEFITS

- Stabilizes newly-graded soils
- Keeps seed and mulch hydrated for rapid germination and sprouting
- Retains fertilizer in the soil mixture, thereby reducing leaching
- Aids in uniform vegetation cover development over the entire treated surface
- Minimizes drought stress

APPLICATION RATE

- 25 - 30 lb./acre

Left: Hydroseeded without WATERSAVER
Right: Hydroseeded with WATERSAVER
