

# PERMAVOID WATER HARVESTING

Convert stormwater from a waste product into a valuable resource by storing in Permavoid.

Reduce runoff by diverting excess water to Permavoid for use during periods of drought.

Reduce operating budgets by replacing costly irrigation with water captured on site.

Further reduce costs by using capture rainwater to flush toilets, wash cars, wash clothes or purify for drinking water.

Reduce demands on local ground water by saving rainwater within Permavoid.

Mimic the natural behavior of your site prior to development by reducing stormwater runoff.
