

## Geomembrane Liner QA/QC Plans

### What are Geomembrane Liner QA/QC Plans?

A Liner QA/AC Plan is prepared under the direction of a licensed professional engineer for water quality ponds when a geomembrane liner is required. It shall be the basis for the type and rate of quality control testing performed and reported in soil liner evaluation reports. It is essentially the instruction manual for installation of the liner.

### What are the benefits of Geomembrane Liner QA/QC Plans?

Our team walks you through the entire process from writing the report on how to install the liner, to tying it into the ground and nearby structures, and then performing the inspections during construction. A final report is prepared so that the client can turn it in to a governmental authority to show that the liner was properly installed per manufacturer's or engineer's instructions.
