

## BMP Maintenance

### What is BMP Maintenance Service?

BMP Maintenance is a practice or a combination of practices, whether land-based, proprietary or natural, that provide a level of treatment and/or storage to improve the water quality of watersheds. Each BMP requires a form of maintenance, whether its a filter, cleaning sediment, removing vegetation, or rebuilding damage. GeoSolutions sends a representative to perform an evaluation, followed up by a proposal on the services that need to be rendered.

### What are the benefits of our BMP Maintenance Services?

When BMPs are regularly maintained, they operate optimally, and the receiving waters are protected from stormwater pollutants. Our knowledge of the wide array of available BMPS for any given jobsite allows us to properly maintain these products to keep your site compliant.
