

Geomembrane Installation Inspection Services

What are Geomembrane Installation Inspection Services?

A geomembrane liner QA/AC Plan is prepared under the direction of a licensed professional engineer for water quality ponds and other related applications when a geomembrane liner is required. It shall be the basis for the type and rate of quality control testing performed and reported in soil liner evaluation reports. It is essentially the instruction manual for installation of the liner.

What are the benefits of our Geomembrane Installation Inspection Services?

Our team walks you through the entire process from writing the report on how to install the liner, to tying it into the ground and nearby structures, and then performing the inspections during construction. A final report is prepared for the client to turn in to the governmental authority, showing that the liner was properly installed per manufacturer's and engineer's instructions.
