

Trench Safety/Excavation Safety Plans

What are Trench Safety/Excavation Safety Plans?

Trench/Excavation Safety Plans provide stability to a trench or other excavation areas within a construction site and keeps the workers safe while they carry out their duties. Whenever a project requires excavation for utilities or structures, proper planning to reinforce the side walls is key to prevent the side slopes from collapsing. Whenever excavation is required, the soils should be laid back at a safe slope. Otherwise, proceeding with an engineered shoring system is the best option.

What are the benefits of our Trench Safety/Excavation Safety Plans?

Site Safety is our top priority. Our experienced team can help you arrive at a solution quickly. We will manage the design and analyze all options to see if an engineered system is required. This includes mechanical systems, if needed, in order to meet Occupational Safety and Health Administration (OSHA) requirements.
